NEW!!

E-Filming 360° Panorama Photo System for DSLR Cameras

The new **E-filming Digital Drive 360° Panorama Camera Base** is an automatic system for making panorama, spherical and 3D rotation photographs quickly, easily and affordably.

Panorama, Spherical, and 3D rotation photographs and presentations are much simpler now that digital cameras and software can stitch several digital pictures together. In order to create these images, a level shooting platform and a camera rotation device are required.

Until now most panorama camera bases were manually rotated and operated like scientific instruments. Photographers had to move the camera slowly and try to match all the rulers and markers in the process. It was a difficult and time-consuming process that only experienced photographers could do with good results.

The **E-Filming Digital Drive Panorama Camera Base** changes all that. Panoramic picture taking is now easy, quick and automatic. With the included "Cool Stitch" and "3D Maker" software, virtually anyone can make their own panorama, spherical, and 3D rotation photographs in minutes. It provides a new dimension in photography for all photographers.

Of course, for the serious photographers and professionals who require more sophisticated software, there is additional photo software commercially available to get even more stunning effects while using the **E-filming Digital Drive Panorama Camera Base**.

The uses for this product are endless. Here are just a few suggestions:

1. Ultra detailed giga-pixel panorama images.
2. Product 3D rotational display on the internet for better product presentation.
3. Real estate 3D or panorama room showcase.
4. Weddings, parties, and major events photography.
5. Custom automobile, boats, aircraft, and other transportation interior showcase.
6. Electronic mapping.
7. Vacation spot super panorama photos.

Check out the product introduction video, and 3D rotation demonstration:
