FLOTONE graduated background is a beautiful synthetic PVC material for professional photographers, art directors, graphic designers, etc. These smoothly graduated backgrounds afford interesting lighting effects without losing valuable time setting up and doing trial shots.

FLOTONE allows the photographer to achieve, in just seconds, beautiful effects that would take hours with lights and single-tone backgrounds.

Each FLOTONE sheet is individually hand-made to achieve a silky matte, non-glare surface. The synthetic PVC material and colors do not absorb water, so they can be used with ice cubes, fruit, flowers, etc. They can be cleaned with a mild soap solution and soft cloth, making FLOTONE reusable.

FUJIFILM GFX-SERIES

GFX-50S

The FUJIFILM GFX 50S medium format mirrorless digital camera adopts a 43.8x 32.9mm medium format (FUJIFILM G Format) sensor with 51.4 MP. Featuring premium design and excellent operability stemming from the highly reputable digital camera X Series system and the accumulation of image design technology from over 80 years of experience, the GFX 50S achieves the highest ever image quality from Fujifilm.

Released with the APS-C sensor in 2011, the X Series has earned high praise from professional photographers and photography enthusiasts alike, due to its excellent image quality and mobility across a wide range of genres including landscapes, snaps, portraits, and sports photos. On the other hand, there were also many photographers craving for the release of a camera equipped with a large-size sensor with an even higher number of effective pixels, which could be used mainly in the fields of commercial and studio portrait photography, while at the same time keeping the excellent color reproduction of the X Series intact. In response to those voices, Fujifilm developed the FUJIFILM GFX 50S and the FUJINON GF Lenses series as a system for photographers that require even higher image quality than can be covered by the current X- Series lineup.

- Equipped with a 43.8mm x 32.9mm, 51.4 MP CMOS sensor, boasting approx. 1.7x the area of full frame sensors
- Equipped with X Processor Pro image processing engine
- 3.69M-dot organic EL electronic viewfinder & 2.36M-dot touchscreen LCD back panel
- Compact & lightweight body with high rigidity due to the adoption of magnesium alloy
- Newly developed large diameter G Mount with excellent robustness and durability
- Newly developed ultra-high resolution FUJINON GF Lenses

Super DHG ND500 & ND1000 Filters

MARUMI

Marumi is pleased to announce the launch of high density ND filters Super DHG ND 500 (2.7) & ND 1000 (3.0). Like the current DHG ND series, the neutral color balance maintains the original color of the images. In addition, our Super DHGND 500 (2.7) & ND 1000 (3.0) filters have a Water and Oil Repellent Coating to allow trouble-free shooting near water.

ND500 (2.7) reduces light amount to 1/500 which is equivalent to 9 stops. ND 1000 (3.0) reduces light amount to 1/1000 which is equivalent to 10 stops.

The high density ND filters enable creative photographers who want to capture long exposure daytime images.

Dynamic MC-L370 - State-of-the-art Dynamic Multi-Coating™ significantly reduces reflections and flare by increasing light transmission to over 99.6%. Cuts ultraviolet light at 370nm, 20nm lower than standard UV/Haze filters, for more accurate color rendition, greater contrast and sharper looking photo and video images.

MC-Center ND - This unique Multi-Coated neutral density filter has a density of .05 (1/8 f-stop / filter factor 1.1) at dead center which decreases gradually to zero at the edges. Compensates for the tendency of many wide angle/zoom lenses to under expose at the edges (over expose in the center) due to light fall off at the edges.
