P-424X
Recommended Ball Heads:
G-20X, K-20X, K-30X L-10

For ultimate stability, nothing but a tripod will do. However, there are times when a tripod is not practical or allowed. A monopod offers excellent stability when working with long telephoto lenses and makes a difference in low-light situations. Monopods are easy to carry, can be set up instantly and are ideal when you are working in tight spaces.

You've seen sports photographers on the sidelines with huge lenses - they are given small spaces to shoot from and often need to quickly move from place to place. Using a tripod is not an option under these conditions. Only a monopod will do the job!

The **NEW Sirui P-324X and P-424X Photo/Video Monopods** have three sturdy fold-down support feet that provide stability of a tripod with the convenience of a monopod! The rugged feet can be stepped on to prevent the monopod from moving, allowing you to creatively pan 360° and tilt up to 15° in any direction! This is possible thanks to the extremely smooth and adjustable ball head base located on the bottom of the monopod leg.

Features

1. The **P-324X/424X** have three sturdy fold-down support feet that provide stability of a tripod with the convenience of a monopod!
2. Foam grip for solid hold in wet or cold conditions
3. The mounting plate comes with a double headed, reversible screw that accommodates 1/4" and 3/8" tripod sockets

What's included:
wrist strap,
soft carrying case
and tools
