

SIRUI PROFESSIONAL VIDEO SYSTEMS, TRIPODS and VIDEO HEAD

SIRUI VT- 2003/2203 PROFESSIONAL VIDEO TRIPODS

The key to producing a high quality video is the creativity of the videographer and a way to stabilize the camera. To produce the best results, you need to use a professional quality video tripod. Whether you are using a high-end digital video camera or a DSLR with follow-focus, monitor, etc., you need a solid, versatile support system, like the Sirui VT-2003/2203, to make sure you get the most from your expensive equipment.

Total flexibility

When you're working in a studio, the fully adjustable ground level spreader provides precise leg positioning and added stability. Even when you use all three leg sections (for high-angle shooting), you can be confident that your gear will be safe! If you are shooting outdoors on uneven terrain, you can remove the ground spreader for fast, convenient, stable leg positioning. And when you're working on a slippery stone or wooden surface, simply attach the included rubber feet, and keep on filming, without missing a beat.

Features:

- 1) The **3-Section multi-tube leg design** offers increased stability and reduced vibrations.
- 2) The precision-built aluminum spider offers **lightweight construction** and **superior load capacity**.
- 3) The built-in 75mm bowl works with the **Sirui Y75B Leveling Ball Set** and other popular leveling systems. You can then add a Sirui VH-20 Professional Video Head (or other models) onto the VT-2003/2203.
- 4) The **Sirui VT Series Professional Video Tripod** is available with lightweight **8-layer Carbon Fiber** or economical aircraft grade **Aluminum legs**.
- 5) Like all Sirui products, the VT Series tripods are designed to withstand extreme weather conditions (-40 ~ 212°F/-40 ~ 100° C) and are backed by a **Sirui 6-year warranty**.

Sirui VH-20 PROFESSIONAL FLUID VIDEO HEAD

Precision machining and forged aircraft aluminum body provides a rugged, reliable head that weighs only 4.6lb (2.1kg)! Smooth fluid movements combined with an advanced balancing system – 360° horizontally and +/-90° vertically.
