

SIRUI VH-10 PROFESSIONAL FLUID VIDEO HEAD

Compact design • Professional Quality Made for today's DSLR/Video Systems

VH-10

NEW!

VH-10

Professional Fluid Video Head

The world of videography has quickly changed over the past few years. Many photographers have realized the need and advantage of shooting videos. The introduction of DSLRs and lower priced modular video cameras that can produce professional quality videos, has accelerated this trend.

Along with the growth of video has come the need for high quality video heads that are compact in size, but provide the control needed to produce videos with smooth pans, controlled tilts and seamless transitions. The SIRUI VH-10 Professional Fluid Video Head is a compact video head designed for today's photo/videographers.

While this precision-machined aluminum video head weighs only 0.9kg (1.98lb), it can easily handle camera systems (camera, lens, grip, lights, etc.) weighing up to 6kg (13.2lb)! And to keep everything level, it has a 2kg (4.4lb) built-in counterbalance system.

The panning resistance is preset to provide amazingly smooth 360° pans and can be locked in position when you need precise framing. The SIRUI designed fluid head tilting mechanism lets you steplessly dial in the amount of resistance you need - producing the smooth, professional looking movement you demand, whether you're working with a heavy or lightweight camera system.

When the Tilt Control Knob has no resistance, the head can quickly be moved to the desired angle. The counterbalance mechanism helps to bring the head back to a neutral position when you tilt the head - this helps camera balance and reduces unsteady tilt sequences, even when no resistance is set. As you increase the resistance, or drag, you noticeably smooth out the look of your tilts. When you combine the smooth panning motion with properly selected drag for tilting, you will achieve a very fluid, professional look and feel to your videos. You can also lock panning and/or tilting, so no movement occurs at all.

Since you will be using different camera/lens combinations, you will need to make forward and backward camera position adjustments on the video head, for proper balance and alignment. The VH-10 Quick Release Platform can do this very quickly and easily. It has a dual safety lock system to prevent the camera from accidentally falling off when the primary locking mechanism is loosened. You must push the secondary release button to remove the camera from the video head. Very safe!

To make horizontal alignment of your camera system simple, there are 2 bubble levels on the SIRUI VH-10 Video Head – one on the base of the head (to make sure your tripod is properly aligned) and one on top of the head (to check alignment of the camera).

Features

- Precision machining and forged aircraft aluminum body provides a rugged, reliable head that weighs only 1.98lb (0.9kg!) Supports up to 13.2 lb (0.6kg)
- Smooth fluid movements combined with an advanced balancing system – 360° horizontally and +/-90° vertically
- Two bubble levels for critical alignment

Accessories

VH-350 Quick Release Plate

VH-125D Quick Release Plate

What's included:
Handle, Quick release plate (Manfrotto compatible)

SIRUI PH-20 PROFESSIONAL FLUID VIDEO HEAD

VH-20 FLUID VIDEO HEAD

VH-20

VH-20

Professional Fluid Video Head

To create beautiful professional videos, you need to have a video head that provides smooth movements and transitions. The **Sirui VH-20 Professional Fluid Video Head** has a **fluid system for smooth panning and tilting**, featuring 3 different resistance settings plus a freewheeling position for fast horizontal and vertical movements.

The **vertical tilt** movement has a **spring-assisted mechanism** for added support and auto-return to the neutral position.

You can make forward and backward camera position adjustments on the head for balance and alignment very quickly and easily. The Quick Release platform has a **dual safety lock** system to prevent the camera from accidentally falling off when the primary locking mechanism is loosened. You must push the secondary release button to remove the camera from the video head.

Superb Flexibility

By turning the horizontal panning dial from 0 (no resistance) to 1, 2 or 3, you increase the drag to slow and smooth out your panning (360°). The same is true with the tilting dial. At 0 position, the head moves quickly up and down (+/-90°) – and the spring mechanism helps to bring the head to a neutral position when you release it. As you add more resistance (dial in higher numbers), you smooth out your tilts. When you combine both panning and tilting motions with some drag resistance, you will achieve a very fluid, professional look to your videos. You can also lock panning and/or tilting, so no movement occurs at all.

Lightweight, yet strong!

The precision-machined aluminum Sirui VH-20 video head weighs only 4.6lb (2.1kg), but, it can hold up to 33lb (15kg) – a serious video head! To make horizontal alignment of the head extra easy, there are 2 bubble levels – one on the base of the head (with an LED for low-light viewing) and one on top of the video head (a Sirui first!). To attach the video head to a video tripod like the Sirui VT-2003/ 2203, you'll need a Sirui Y75B Leveling Ball Set. This simple device screws into the VH-20 and enables you to precisely align the video head, even when the tripod legs are uneven. Just twist to loosen, make your adjustment and twist to lock it in place.

Features

- Precision machining and forged aircraft aluminum body provides a rugged, reliable head that weighs only 4.6lb (2.1kg)!
- Smooth fluid movements combined with an advanced balancing system – 360° horizontally and +/-90° vertically

Accessories
